

## "Web of Science"

Georgian technical University has access to the “web of Science” collection from December 8, 2017. The web collection includes 16 000 scientific magazines of every fields- Technical science, medicine, social sciences, humanities and Art. The database includes information regarding Author’s index, which is the best indicator to assess the article, its importance and research impact. The access to “Web of Science” will allow the scientists working in Georgia to search the most important thematic papers in their field and find the best collaborator for a research and a high-impact magazine to publish their research. Via the “Web of Science” database the university administrations will have the opportunity to improve their scientific development strategies.

Using "Web of Science", the administration of the university will have the opportunity to develop a scientific development strategy with regard to the following issues:

- Which scientist / laboratory / department is conducting research effectively;
- In which scientific direction is the University the most successful;
- Comparison with other universities, which are ranked X positions;
- With which organizations are they cooperating and with which organizations will they be cooperating;
- How to Commercialize Research (Research);
- What strategic decisions should be taken by the universities for the development of science, and what measures of measurement should be used for success.
