

Erasmus + mobility for training in Konstantine the Philosopher University of Nitra (UKF) (Slovakia)

In the frame of collaboration between Georgian Technical University and Konstantine the Philosopher University of Nitra I was able to apply for Erasmus + mobility for training program.

Mobility period was from 5 to 9 June, 5 working days. At that period of time, I had meetings with academic and administrative staff members of UKF. I met with international relationship department members and reviewed possibilities of enlarging our universities collaboration possibilities for Erasmus + exchange program.

During the period of training, I was able to discuss planning and ongoing process of learning processes according to different study levels. We reviewed steps of curriculum planning with professor Danka Lucovic. We had very productive meetings with faculty staff of Informatics and control system faculty, especially with Viera Tomkova and Miroslav Sebo, who shared with me their experience about 3-dimensional modeling possibilities and usability in medicine. Also, met with head of studying department, professor Jana Depeshova to discuss ongoing accreditation process in our universities.

At the end of the mobility period, we had panel discussion with professor of informatics and control systems department Level Neavel about artificial intelligence research projects in our universities.
